Daily Exercises for your Tongue & Upper Airway

*Research has found daily exercises can help improve snoring and sleep apnea. Do the following exercises each night about 20 minutes before bedtime. It is important you can breathe through your nose; if you cannot get enough air through your nose, talk to your doctor or dentist.

1. Using your toothbrush with a front to back motion, brush the top of your tongue five times and brush both sides of your tongue five times.

2. Place the tip of your tongue against the front of the top of your mouth and slide your tongue back. Do this for three minutes.

3. Press your entire tongue against the top of your mouth while using an upward sucking force. Do this for three minutes.

4. Force the back of your tongue against the floor of your mouth while keeping the tip of your tongue touching your bottom front teeth. Do this for three minutes.

5. With your mouth open and your tongue on the floor of your mouth, say “ahhh” continuously for three minutes. Repeat intermittently for another three minutes.

6. With your mouth closed, produce suction movements. Do this for three minutes.

7. Place your finger in your mouth and produce suction movements. Do this for three minutes.

8. Angle your mouth left and right ten times each side. Do this for three sets of ten. Angle your mouth left and hold for ten seconds, then angle your mouth right and hold for ten seconds. Repeat six times.
